Ethereum Breaking This Confluence Resistance Could Spark a Significant Surge

above the \$4,250 support against the US Dollar. ETH price could stage a strong rally if it clears the \$4,450 resistance term. Ethereum is stable and supported above the \$4,200 and \$4,250 levels. The price is now trading above \$4,300 100 hourly simple moving average. There is a key bullish trend line forming with support near \$4,320 on the hourly chart of ETH/USD (data provided via Kraken). The pair could start a fresh rally if it clears the key \$4,450 resistance zone. Ethereum Price Remains stable in the near term. Ethereum consolidated in a range above \$4,100 and \$4,200 levels. ETH climbed above the \$4,400 level, but it is still consolidating near a confluence resistance near \$4,450. The recent high was formed near \$4,456 and it is now consolidating gains. The price is trading nicely above the 23.6% Fib retracement level of the recent \$3,900 swing low to \$4,456 high. An initial resistance on the upside is near the \$4,400 level. Source: ETHUSD on Kraken. The first major resistance is near the \$4,420 level. The next major hurdle is near the \$4,450 level. A clear break and close above the \$4,450 level could stage a steady increase in the near term. In the stated case, the price could drift towards the \$4,500 level in the near term. Dips Limited in ETH? If ethereum fails to start a fresh increase above the \$4,450 level, it could extend its consolidation in the near term. An initial support on the downside is near the \$4,325 level. The key support is now forming near the \$4,320 level on the hourly simple moving average. If there is a clear break below the \$4,320 support, the price could extend losses. A clear breakdown support is \$4,200 or the 50% Fib retracement level of the recent wave from the \$3,900 swing low to the recent high of \$4,456 from which the price could decline towards \$4,000. Technical Indicators Hourly MACD – The MACD for ETH/USD is currently in the bullish zone. Hourly RSI – The RSI for ETH/USD is near the 50 level. Major Support Level – \$4,200 Major Resistance Level – \$4,450
